                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             LOCALIZED ON THE PLASMA MEMBRANE (PROBABLE). LOCALIZED ON THE BASOLATERAL SURFACE OF THE ENTEROCYTES.
TISSUE SPECIFICITY: WIDELY EXPRESSED. THE PROTEIN IS DETECTED DUODENUM AND JEJUNUM BUT NOT IN ILEUM AND COLON.
INDUCTION: SLIGHTLY BY ZINC IN THE INTESTINE, BUT NOT THE LIVE SIMILARITY: BELONGS TO THE SLC30A FAMILY OF TRANSPORTERS.
                                                                                                                                                                                                                                                                                                                                                                                                                                    similarity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is derived from human high molecular weight kininogen (HK) domain 5. HK is a 120 kD glycoprotein which binds with high affinity to endothelial cells, where it is cleaved to two-chain high molecular weight kininogen (HKa) by plasma kallikrein. Hka or a synthetic compound comprising part or all of the present sequence may be used in a pharmaceutical composition for inhibiting angiogenesis. Angiogenesis occurs in a number of disease states, such as tumour formation and expansion, and certain ocular disorders. It can also occur in a rheumatoid joint, hastening joint destruction by allowing an influx of leukocytes. The composition may inhibit angiogenesis by inhibiting endothelial cell proliferation or by inducing endothelial cell apoptosis. Peptides used in the compostion may be recombinant peptides, natural peptides, or synthetic peptides. They may also be methods using, for example, solid phase synthesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                            high molecular weight kininogen (HKa) by plasma kallikrein. Hka or a synthetic compound comprising the present sequence may be used in a pharmaceutical composition for inhibiting angiogenesis. Angiogenesis occurs in a number of disease states, such as tumour formation and expansion, and certain ocular disorders. It can also occur in a composition ocular disorders.
rheumatoid joint, hastening joint destruction by allowing an influx of leukocytes. The composition may inhibit angiogenesis by inhibiting endothelial cell proliferation or by inducing endothelia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           or a synthetic compound comprising the present sequence may be used in a pharmaceutical composition for inhibiting angiogenesis. Angiogenesis occurs in a number of disease states, such as tumour formation and expansion, and certain ocular disorders. It can also occur in a rheumatoid joint, hastening joint destruction by allowing an influx of leukocytes. The composition may inhibit angiogenesis by inhibiting endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell proliferation or by inducing endothelial cell prolifer
                                                                                                                                                                                                                          The present sequence is derived from human high molecular weight kininogen (HK) domain 5. HK is a 120 kD glycoprotein which binds with high affinity to endothelial cells, where it is cleaved to two-chain
                                                                                                                                                                                                                                                                                                                                                                                                                                  A pharmaceutical composition used to inhibit angiogenesis, inhibit endothelial cell proliferation, and induce endothelial cell apoptosis
                                                                                                                                                                                                                                                                                                                                                Claim 13; Page 29; 52pp; English.

                                                                                                                            The present sequence represents an analogue of the light chain of human high molecular weight kininogen. High molecular weight kininogen is a 120 kDa glycoprotein which binds with high affinity to endothelial cells, where it is cleaved by plasma kallikrein into heavy and light chains. Analogues of high molecular weight kininogen are used in the method of the invention. The specification describes a method of inhibiting endothelial cell proliferation. The method comprises contacting endothelial cells with a compound containing high molecular weight kininogen analogues. The method and the compounds can be used for inhibiting endothelial cell proliferation. The compounds can also be used to inhibiting angiogenesis. The compounds can also be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (UTEM )

Peptides used in the compostion may be recombinant peptides, natural peptides, or synthetic peptides. They may also be chemically synthesised, using, for example, solid phase synthesis methods.
